(54) **1H-IMIDAZOPYRIDINE DERIVATIVES**

(57) 1H-Imidazopyridine derivatives represented by
the following general formula or salts thereof:

wherein R¹ represents hydrogen atom, hydroxyl group, an alkyl group, a cycloalkyl group, styryl group, or an aryl group; R² represents hydrogen atom, an alkyl group, a halogen atom, hydroxyl group, amino group, a cyclic amino group, or phenoxy group; ring A represents a homocyclic or heterocyclic ring which may be substituted; R³ represents a saturated nitrogen-containing heterocyclic group; and m represents an integer of from 0 to 3. The derivatives have excellent inhibitory actions against production of TNF or IL-1 and are extremely useful as preventive or therapeutic agents for diseases in which a cytokine is mediated.

EP 1 104 764 A1

Description

Technical Field

5 [0001] The present invention relates to novel 1H-imidazopyridine derivatives or salts thereof which have a potent inhibitory action against production of tumor necrotizing factor (TNF) or interleukin-1 (IL-1) and are useful as medica-
 10 ments for preventive or therapeutic treatment of diseases of humans and animals, in which a cytokine such as TNF, IL-1 is mediated, which include chronic inflammatory diseases (e.g., rheumatic arthritis, osteoarthritis, etc.), allergic rhinitis, atopic dermatitis, contact dermatitis, asthma, sepsis, septic shock, various autoimmune diseases (autoimmune
 15 hemic diseases (e.g., hemolytic anemia, aplastic anemia, idiopathic thrombocytopenia, etc.), autoimmune intestinal diseases (e.g., ulcerative colitis, Crohn's disease, etc.), autoimmune corneitis (e.g., keratoconjunctivitis sicca, spring catarrh, etc.), endocrine ophthalmopathy, Graves disease, sarcoid granuloma, multiple sclerosis, systemic erythema-

Background Art

[0002] Some compounds having 1H-imidazoquinoline structure are known which are analogous to the compounds of the present invention. Journal of Medicinal Chemistry, Vol. 11, p. 87 (1968) discloses 1-(2-piperidinoethyl)-1H-imidazo[4,5-c]quinoline, Japanese Patent Unexamined Publication (KOKAI) No. Sho 60-123488/1985 discloses 1-isobutyl-1H-imidazo[4,5-c]quinoline-4-amine (general name: imiquimod) as a compound having an antiviral action, and Hungarian Patent Publication No. 34479 (Patent No. 190109) discloses 1-(2-diethylaminoethyl)-1H-imidazo[4,5-c]quinoline as a compound having analgesic and anticonvulsant actions. However, 1H-imidazopyridine derivatives as those according to the present invention have never been known so far.

25 [0003] Moreover, the aforementioned imiquimod has been known to have an inducing action of a few kinds of cytokines such as interferon (IFN), TNF, IL-1 and the like, which is described in Journal of Interferon Research, Vol. 14, p. 81 (1994). However, 1H-imidazopyridine derivatives or 1H-imidazoquinoline derivatives having an inhibitory action against production of TNF or IL-1, which action is totally opposite to those taught by the aforementioned prior arts, have never been known so far.

Disclosure of the Invention

[0004] An object of the present invention is to provide novel compounds which have excellent inhibitory actions against production of cytokines such as TNF and IL-1 and the like are useful as medicaments.

35 [0005] The inventors of the present invention made intensive studies to achieve the object. As a result, they found novel 1H-imidazopyridine derivatives which have an excellent inhibitory action against production of TNF or IL-1 and achieved the present invention.

[0006] The present invention thus relates to novel 1H-imidazopyridine derivatives represented by the following general formula (I) or salts thereof:

50 wherein R1 represents hydrogen atom, hydroxyl group, an alkyl group which may have one or more substituents, a cycloalkyl group which may be substituted, a styryl group which may be substituted, or an aryl group which may have one or more substituents; R2 represents hydrogen atom, an alkyl group, a halogen atom, hydroxyl group, an amino group which may have one or two substituents, a cyclic amino group which may be substituted, or a phenoxy group which may be substituted; ring A represents a homocyclic or heterocyclic ring which may be substituted with one or
 55 more alkyl groups, alkoxy groups, or halogen atoms; R3 represents a saturated nitrogen-containing heterocyclic group which may be substituted; and m represents an integer of from 0 to 3; provided that, when R3 represents unsubstituted piperidino group, at least one of R1 and R2 is not hydrogen atom.

[0007] According to the second embodiment of the present invention, there are provided novel 1H-imidazopyridine

derivatives represented by the following general formula (II) or salts thereof:

wherein R¹, R², ring A and m have the same meanings as those defined above; R⁴ represents hydrogen atom, an alkyl group, benzyl group, triphenylmethyl group, an alkanoyl group which may be substituted, an alkoxy carbonyl group, benzyloxycarbonyl group, a thiocarbamoyl group which may be substituted, an alkanesulfonyl group, a benzenesulfonyl group which may be substituted, or amidino group; Y represents methylene group, oxygen atom, sulfur atom, nitrogen atom, a group represented by NH, or a single bond; and n represents an integer of from 0 to 2.

[0008] According to the third embodiment of the present invention, there are provided, among the compounds represented by the aforementioned general formulas (I) and (II), the compounds wherein ring A is a benzene ring or a thiophene ring, or the salts thereof.

[0009] According to another aspect, there is provided a medicament which comprises as an active ingredient the compound represented by the aforementioned general formula (I) or (II), or a pharmacologically acceptable salt thereof. The medicament is useful for preventive or therapeutic treatment of diseases of mammals including humans, in which a cytokine such as TNF, IL-1 is mediated, which include chronic inflammatory diseases (e.g., rheumatic arthritis, osteoarthritis, etc.), allergic rhinitis, atopic dermatitis, contact dermatitis, asthma, sepsis, septic shock, various autoimmune diseases [autoimmune hemic diseases (e.g., hemolytic anemia, aplastic anemia, idiopathic thrombocytopenia, etc.), autoimmune intestinal diseases (e.g., ulcerative colitis, Crohn's disease, etc.), autoimmune uveitis (e.g., keratoconjunctivitis sicca, spring catarrh, etc.), endocrine ophthalmopathy, Graves disease, sarcoid granuloma, multiple sclerosis, systemic erythematodes, multiple chondritis, pachydermia, active chronic hepatitis, myasthenia gravis, psoriasis, interstitial pulmonary fibrosis and the like], diabetes, cancerous cachexia, HIV-infectious cachexia and the like.

[0010] According to a further aspect, there are provided a use of the compound represented by the aforementioned general formula (I) or (II), or a pharmacologically acceptable salt thereof for the manufacture of the aforementioned medicament; and a method for the preventive or therapeutic treatment of diseases in which a cytokine such as TNF, IL-1 is mediated, which comprises the step of administering a preventively or therapeutically effective amount of the compound represented by the aforementioned general formula (I) or (II), or a pharmacologically acceptable salt thereof to a mammal including a human. In addition, the present invention provides an inhibitor against production of tumor necrotizing factor (TNF) or Interleukin-1 (IL-1) which comprises as an active ingredient the compound represented by the aforementioned general formula (I) or (II), or a pharmacologically acceptable salt thereof.

Best Mode for Carrying Out the Invention

[0011] Specific explanations of the compounds of the aforementioned general formulas (I) and (II) of the present invention will be given below. The compounds represented by the aforementioned general formula (II) are characterized in that they have a specific saturated nitrogen-containing heterocyclic group which may have specific substituents as R³ among the compounds represented by the aforementioned general formula (I). However, the scope of the present invention is not limited to the compounds represented by the aforementioned general formula (II), and it should be understood that any compounds having as R³ a saturated nitrogen-containing heterocyclic group which may be substituted fall within the scope of the present invention.

[0012] In the aforementioned general formulas (I) and (II), examples of the alkyl group represented by R¹, R² or R⁴ include, for example, methyl group, ethyl group, n-propyl group, isopropyl group, n-butyl group, isobutyl group, sec-butyl group, tert-butyl group, n-pentyl group, isopentyl group, neopentyl group, n-hexyl group and the like.

[0013] Examples of the cycloalkyl group represented by R¹ include, for example, cyclopropyl group, cyclobutyl group, cyclopentyl group, cyclohexyl group, cycloheptyl group and the like. Examples of the aryl group represented by R¹ include, for example, phenyl group, 2-pyridyl group, 3-pyridyl group, 4-pyridyl group, 3-pyridazinyl group, 4-pyridazinyl group, 2-pyrimidinyl group, 4-pyrimidinyl group, 5-pyrimidinyl group, pyrazinyl group, 2-furyl group, 3-furyl group, 2-thienyl group, 3-thienyl group, 1-pyrrolyl group, 2-pyrrolyl group, 3-pyrrolyl group, 1-imidazolyl group, 2-imidazolyl group, 4-imidazolyl group, 1-pyrazolyl group, 3-pyrazolyl group, 4-pyrazolyl group, 5-pyrazolyl group, 2-oxazolyl group, 4-oxazolyl group, 3-isoxazolyl group, 4-isoxazolyl group, 5-isoxazolyl group, 2-thiazolyl group, 4-thiazolyl group, 5-thi-

as fluorine atom, chlorine atom, and bromine atom; hydroxyl group; alkyl groups such as methyl group, ethyl group, n-propyl group, isopropyl group, n-butyl group, isobutyl group, sec-butyl group, tert-butyl group, n-pentyl group, isopentyl group, neopentyl group, and n-hexyl group; trifluoromethyl group; aryl groups such as phenyl group, naphthyl group, and pyridyl group; alkoxy groups such as methoxy group, ethoxy group, n-propoxy group, isopropoxy group, n-butoxy group, isobutoxy group, sec-butoxy group, and tert-butoxy group; aryloxy groups such as phenoxy group; amino groups which may be substituted such as amino group, methylamino group, ethylamino group, n-propylamino group, isopropylamino group, cyclopropylamino group, cyclobutylamino group, cyclopentylamino group, cyclohexylamino group, dimethylamino group, diethylamino group, anilino group, pyridylamino group, benzylamino group, dibenzylamino group, acetylamino group, trifluoroacetylamino group, tert-butoxycarbonylamino group, benzyloxycarbonylamino group, benzhydrylamino group, and triphenylmethylamino group; formyl group; alkanoyl groups such as acetyl group, propionyl group, n-butyryl group, isobutyryl group, valeryl group, isovaleryl group, pivaloyl group, fluoroacetyl group, difluoroacetyl group, trifluoroacetyl group, chloroacetyl group, dichloroacetyl group, and trichloroacetyl group; alkoxycarbonyl groups such as methoxycarbonyl group, ethoxycarbonyl group, n-propoxycarbonyl group, isopropoxycarbonyl group, n-butoxycarbonyl group, isobutoxycarbonyl group, sec-butoxycarbonyl group, tert-butoxycarbonyl group, n-pentylloxycarbonyl group, and n-hexylloxycarbonyl group; benzyloxycarbonyl group; carbamoyl group; alkylcarbamoyl groups such as methylcarbamoyl group, ethylcarbamoyl group, n-propylcarbamoyl group, isopropylcarbamoyl group, n-butylcarbamoyl group, isobutylcarbamoyl group, sec-butylcarbamoyl group, and tert-butylcarbamoyl group; thlocarbamoyl group; alkylthiocarbamoyl groups such as methylthiocarbamoyl group, ethylthiocarbamoyl group, n-propylthiocarbamoyl group, isopropylthiocarbamoyl group, n-butylthiocarbamoyl group, isobutylthiocarbamoyl group, sec-butylthiocarbamoyl group, and tert-butylthiocarbamoyl group; amidino group; alkylthio groups such as methylthio group; alkanesulfinyl groups such as methanesulfinyl group; alkanesulfonyl groups such as methanesulfonyl group, ethanesulfonyl group, n-propanesulfonyl group, and n-butanessulfonyl group; arylsulfonyl groups such as p-toluenesulfonyl group, p-methoxybenzenesulfonyl group, and p-fluorobenzenesulfonyl group; aralkyl groups such as benzyl group, naphthyl group, pyridylmethyl group, furfuryl group, and triphenylmethyl group; nitro group; cyano group; sulfamoyl group; oxo group; hydroxylimino group; alkoxyimino groups such as methoxyimino group, ethoxyimino group, n-propoxyimino group, and isopropoxyimino group; ethylenedioxy group and the like.

[0020] The compounds represented by the aforementioned general formulas (I) and (II) of the present invention can be converted into salts, preferably, pharmacologically acceptable salts, if desired; or free bases can be generated from the resulting salts.

[0021] Examples of the salts, preferably, the pharmacologically acceptable salts, of the compounds represented by the aforementioned general formulas (I) and (II) of the present invention include acid-addition salts, for example, salts with mineral acids such as hydrochloric acid, hydrobromic acid, hydroiodic acid, nitric acid, sulfuric acid, and phosphoric acid; and salts with organic acids such as acetic acid, propionic acid, butyric acid, formic acid, valeric acid, maleic acid, fumaric acid, citric acid, oxalic acid, malic acid, succinic acid, lactic acid, methanesulfonic acid, ethanesulfonic acid, benzenesulfonic acid, p-toluenesulfonic acid, mandelic acid, 10-camphorsulfonic acid, tartaric acid, stearic acid, gluconic acid, nicotinic acid, trifluoroacetic acid, and benzoic acid.

[0022] Among the compounds represented by the aforementioned general formulas (I) and (II) of the present invention, optical isomers may exist for compounds having asymmetric carbons. These optical active compounds and mixtures thereof fall within the scope of the present invention.

[0023] The compounds represented by the aforementioned general formulas (I) and (II) or the salts thereof according to the present invention can exist as any crystalline form depending on manufacturing conditions, or exist as any hydrate or solvate. These crystalline forms, hydrates or solvates, and mixtures thereof fall within the scope of the present invention.

[0024] Preferred compounds of the present invention include, for example, the following compounds and salts thereof; however, the present invention is not limited to these examples:

- (1) 4-chloro-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline;
- (2) 4,8-dichloro-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline;
- (3) 4-chloro-8-methyl-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline;
- (4) 4-chloro-8-methoxy-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline;
- (5) 4-chloro-2-phenyl-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline;
- (6) 4,8-dichloro-2-phenyl-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline;
- (7) 4-chloro-8-methyl-2-phenyl-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline;
- (8) 4-chloro-8-methoxy-2-phenyl-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline;
- (9) 4-chloro-1-[2-(4-piperidyl)ethyl]-2-trifluoromethyl-1H-imidazo[4,5-c]quinoline;
- (10) 4,8-dichloro-1-[2-(4-piperidyl)ethyl]-2-trifluoromethyl-1H-imidazo[4,5-c]quinoline;
- (11) 4-chloro-8-methyl-1-[2-(4-piperidyl)ethyl]-2-trifluoromethyl-1H-imidazo[4,5-c]quinoline;
- (12) 4-chloro-8-methoxy-1-[2-(4-piperidyl)ethyl]-2-trifluoromethyl-1H-imidazo[4,5-c]quinoline;

- (13) 4-chloro-2-(4-methylphenyl)-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline;
 (14) 4-chloro-2-(4-methoxyphenyl)-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline;
 (15) 4-chloro-2-(4-fluorophenyl)-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline;
 (16) 4-chloro-1-[2-(4-piperidyl)ethyl]-2-(4-trifluoromethylphenyl)-1H-imidazo[4,5-c]quinoline;
 5 (17) 4-chloro-2-(2-furyl)-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline;
 (18) 4-chloro-1-[2-(4-piperidyl)ethyl]-2-(2-thienyl)-1H-imidazo[4,5-c]quinoline;
 (19) 4-chloro-2-(2-imidazolyl)-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline;
 (20) 4-chloro-1-[2-(4-piperidyl)ethyl]-2-(2-thiazolyl)-1H-imidazo[4,5-c]quinoline;
 10 (21) 4-chloro-2-(5-methyl-2-thienyl)-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline;
 (22) 4-chloro-1-[2-(4-piperidyl)ethyl]-2-(2-pyrrolyl)-1H-imidazo[4,5-c]quinoline;
 (23) 4-methyl-2-phenyl-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline;
 (24) 2-(4-fluorophenyl)-4-methyl-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline;
 (25) 4-methyl-1-[2-(4-piperidyl)ethyl]-2-(4-trifluoromethylphenyl)-1H-imidazo[4,5-c]quinoline;
 15 (26) 2-(2-furyl)-4-methyl-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline;
 (27) 4-methyl-1-[2-(4-piperidyl)ethyl]-2-(2-thienyl)-1H-imidazo[4,5-c]quinoline;
 (28) 2-(2-imidazolyl)-4-methyl-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline;
 (29) 4-methyl-1-[2-(4-piperidyl)ethyl]-2-(2-thiazolyl)-1H-imidazo[4,5-c]quinoline;
 (30) 4-methyl-2-(3-methyl-2-thienyl)-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline;
 20 (31) 4-methyl-2-(5-methyl-2-thienyl)-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline;
 (32) 4-methyl-1-[2-(4-piperidyl)ethyl]-2-(2-pyrrolyl)-1H-imidazo[4,5-c]quinoline;
 (33) 4-methyl-2-(1-methyl-2-pyrrolyl)-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline;
 (34) 4-chloro-6,7,8,9-tetrahydro-2-phenyl-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline;
 (35) 4-chloro-6,7-dihydro-2-phenyl-1-[2-(4-piperidyl)ethyl]-1H-imidazo[5,4-d]thieno[3,2-b]pyridine;
 25 (36) 4-chloro-2-phenyl-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline;
 (37) 4-chloro-2-phenyl-1-[2-(3-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline;
 (38) 4-chloro-1-[2-(2-morpholinyl)ethyl]-2-phenyl-1H-imidazo[4,5-c]quinoline;
 (39) 4-chloro-2-phenyl-1-[2-(1-piperazinyl)ethyl]-1H-imidazo[4,5-c]quinoline;
 (40) 4,6,7,8,9-pentachloro-2-ethoxymethyl-1-[2-(4-thiomorpholinyl)ethyl]-1H-imidazo[4,5-c]quinoline;

 (42) 4-chloro-2-(3-methyl-2-thienyl)-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline.

[0025] The novel 1H-imidazopyridine derivatives represented by the aforementioned general formula (I) or (II) according to the present invention can be prepared by various methods; however, the preparation methods of the compounds of the present invention are not limited thereto. In the following preparation methods, specific explanations for the compounds represented by the aforementioned general formula (I) will be given, and it is obvious that these preparation methods include the compounds represented by the aforementioned general formula (II).

[0026] As the first synthetic method of the compounds of the present invention, the following synthetic method can be used in accordance with the method disclosed in Japanese Patent Unexamined Publication (KOKAI) No. Hei 3-206078/1991 or Tetrahedron, Vol. 51, p. 5813 (1995):

wherein R⁵ represents hydroxyl group or an alkyl group; R⁶ represents chlorine atom or an alkyl group; R^{1'} has the same meaning as that defined for R¹ (except for hydroxyl group); and R³, m and ring A have the same meanings as those defined above.

[0027] In Step 1, the compound of the general formula (IV) can be obtained by allowing the compound represented by the general formula (III) to react with a nitrating agent such as concentrated nitric acid and fuming nitric acid in the presence or absence of acetic acid, sulfuric acid or the like at a temperature ranging from 0°C to 200°C.

[0028] In Step 2, the compound of the general formula (V) can be obtained by allowing the compound of the general formula (IV) to react with an appropriate chlorinating agent, for example, phosphorus oxychloride, thionyl chloride, phosgene, oxalyl chloride, phosphorus pentachloride or the like, in the presence or absence of a solvent such as toluene at a temperature ranging from 0°C to 200°C.

[0029] In Step 3, the compound of the general formula (VII) can be obtained by reacting the amine represented by the general formula (VI) with the compound of the general formula (V) in a solvent such as N,N-dimethylformamide and toluene in the presence or absence of a base such as triethylamine and potassium carbonate at a temperature ranging from -10°C to the reflux temperature of a solvent.

[0030] In Step 4, the compound of the general formula (VIII) can be obtained by reducing the nitro group in the compound of the general formula (VII) according to an appropriate reducing method, for example, catalytic reduction using a metal catalyst such as platinum, Raney nickel, and palladium/carbon; reduction using nickel chloride and sodium borohydride; reduction using iron powder and hydrochloric acid and the like.

[0031] The reduction can be carried out in a solvent such as water, methanol, ethanol, and tetrahydrofuran, as well as a mixed solvent thereof, at a temperature ranging from 0°C to the reflux temperature of the solvent.

[0032] In Step 5, the compound of the general formula (IX) can be obtained by reacting the compound of the general formula (VIII) with a compound represented by the following general formula (XI), (XII) or (XIII):

wherein R represents a lower alkyl group; X represents a halogen atom; R¹ has the same meaning as that defined for R¹ (except for hydroxyl group), in the presence or absence of a basic catalyst such as triethylamine, or an acid catalyst such as hydrochloric acid and p-toluenesulfonic acid, in the presence or absence of a solvent such as N,N-dimethylformamide, tetrahydrofuran, acetonitrile, xylene and toluene, at a temperature ranging from 0°C to 200°C.

[0033] In Step 6, as a method in place of Step 5, the compound of the general formula (IX) can be obtained by reacting the compound of the general formula (VIII) with a compound represented by the following general formula (XIV):

wherein R¹ has the same meaning as that defined for R¹ (except for hydroxyl group), in the presence of 2,3-dichloro-5,6-dicyano-1,4-benzoquinone in a solvent such as acetonitrile, 1,4-dioxane and tetrahydrofuran at a temperature ranging from 0°C to the reflux temperature of the solvent.

[0034] In Step 7, as a method in place of Step 5 or 6, the compound of the general formula (X) can be obtained by reacting the compound of the aforementioned general formula (VIII) with a compound represented by the following general formula (XV):

wherein R¹ has the same meaning as that defined for R¹ (except for hydroxyl group), in the presence or absence of an acid catalyst such as hydrochloric acid and sulfuric acid, in the presence or absence of a solvent such as N,N-dimethylformamide and toluene, at a temperature ranging from 0°C to 200°C. Moreover, when R⁵ represents hydroxyl group in the general formula (X), the compound of the general formula (IX) can be obtained by carrying out chlorination in Step 8.

[0035] The chlorination is carried out by protecting the compound of the general formula (X), if desired, at the nitrogen atom not bound to the (CH₂)_m group, that is adjacent to the saturated nitrogen-containing heterocyclic group represented by R³, with a protecting group such as alkanoyl groups in a conventional manner, then reacting with an appropriate chlorinating agent, for example, phosphorus oxychloride, thionyl chloride, phosgene, oxalyl chloride, phosphorus pentachloride or the like in the presence or absence of a solvent such as toluene at a temperature ranging from 0°C to 200°C, and further deprotecting in a conventional manner, if desired, to obtain the compound of the general formula (IX) wherein R⁶ is chlorine atom.

[0036] In the second synthetic method of the compounds of the present invention, the compound of the general formula (XVI):

wherein R³, R⁶, m and ring A have the same meanings as those defined above, can be obtained by allowing the compound of the general formula (VIII) to react together with triphosgene in the presence of a base such as triethylamine and potassium carbonate in a solvent such as 1,2-dichloroethane, 1,4-dioxane, tetrahydrofuran, N,N-dimethylformamide and toluene at a temperature ranging from 0°C to the reflux temperature of a solvent.

[0037] In the third synthetic method of the compounds of the present invention, the compound of the general formula (XVII):

wherein Z represents an aromatic ring; the symbol "a" represents an integer of 1 or 2; and R^3 , R^6 , m and ring A have the same meanings as those defined above, can be obtained by carrying out suitable oxidation of the compound of the general formula (IX) which has an aryl group substituted with methylthio group as R^1 , after protecting, if desired, the nitrogen atom not bound to the $(CH_2)_m$ group, that is adjacent to the saturated nitrogen-containing heterocyclic group represented by R^3 , with a protecting group such as alkanoyl groups in a conventional manner, and further deprotecting in a conventional manner, if desired.

[0038] The oxidation can be carried out in various manners according to the desired product. More specifically, the preparation can be made, when the symbol "a" represents an integer of 1, by reacting with an oxidizing agent, for example, chromic acid, hydrogen peroxide, m-chloroperbenzoic acid, sodium periodate, potassium periodate or the like, or when the symbol "a" represents an integer of 2, with an oxidizing agent, for example, chromic acid, hydrogen peroxide, m-chloroperbenzoic acid, osmium tetroxide, ruthenium tetroxide or the like, in a solvent such as tetrahydrofuran, 1,4-dioxane, 1,2-dichloroethane, methanol, acetone, and water, as well as a mixed solvent thereof, at a temperature ranging from 0°C to the reflux temperature of a solvent.

[0039] In the forth synthetic method of the compounds of the present invention, the compound of the general formula (I) wherein R^2 is hydroxyl group can be obtained by allowing a compound of the general formula (I) wherein R^2 is chlorine atom to react with water and an appropriate acid or base in a solvent at a temperature ranging from 0°C to the reflux temperature of a solvent. Examples of the appropriate acid include, for example, organic acids such as formic acid, acetic acid, and trifluoroacetic acid, and mineral acids such as hydrochloric acid, sulfuric acid, and hydrobromic acid. Examples of the appropriate base include, for example, hydroxides, carbonates and hydrogencarbonates of alkali metal such as sodium and potassium and of alkaline-earth metal such as magnesium and calcium and the like. Examples of the solvent include, for example, alcohols such as methanol, ethanol and n-propanol, N,N-dimethylformamide, 1,4-dioxane, tetrahydrofuran and the like, and water-containing solvents thereof.

[0040] In the fifth synthetic method of the compounds of the present invention, the compound of the general formula (I) wherein R^2 is fluorine atom, bromine atom or iodine atom and R^1 is R^1 can be obtained by allowing a compound which is obtained by reacting the compound of the general formula (I) wherein R^2 is chlorine atom and R^1 is R^1 or wherein R^2 is hydroxyl group and R^1 is R^1 with trifluoromethanesulfonic anhydride, methanesulfonyl chloride or p-toluenesulfonyl chloride to react with a metal halide (e.g., potassium fluoride, sodium fluoride, lithium fluoride, potassium bromide, sodium bromide, potassium iodide, sodium iodide, etc.) in an aprotic solvent such as dimethylsulfoxide, N,N-dimethylformamide, and acetonitrile in the presence or absence of a phase-transfer catalyst such as tetraphenylphosphonium bromide, hexadecyltributylphosphonium bromide, and 18-crown-6 at a temperature ranging from 0°C to the reflux temperature of a solvent.

[0041] In the sixth synthetic method of the compounds of the present invention, the compound of the general formula (I), wherein R^3 is a saturated nitrogen-containing heterocyclic group of which the nitrogen atom that is not bound to the adjacent $(CH_2)_m$ group is deprotected, can be obtained by subjecting the compound of the general formula (I), wherein R^3 is a saturated nitrogen-containing heterocyclic group having a protecting group such as alkanoyl groups, alkoxycarbonyl groups, benzyl group and trifluoromethyl group on the nitrogen atom which is not bound to the adjacent $(CH_2)_m$ group, to deprotection with an acid or alkali, or to catalytic reduction with a metal catalyst, according to the type of the protecting group of the nitrogen atom.

[0042] The deprotection by using an acid or alkali can be carried out with an appropriate acid or base in the presence or absence of a cation scavenger such as anisole and thioanisole in a solvent. Examples of the solvent used include, for example, ethyl acetate, methylene chloride, 1,2-dichloroethane, 1,4-dioxane, methanol, ethanol, n-propanol, N,N-dimethylformamide, tetrahydrofuran, and water, as well as a mixed solvent thereof. Examples of the acid used include, for example, hydrochloric acid, an ethyl acetate solution of hydrogen chloride, an ethanolic solution of hydrogen chloride, sulfuric acid, hydrobromic acid, trifluoroacetic acid, methanesulfonic acid, p-toluenesulfonic acid, formic acid, acetic acid and the like. Examples of the base include, for example, hydroxides, carbonates and hydrogencarbonates of alkali metal such as sodium and potassium, and of alkaline-earth metal such as magnesium and calcium and the like. The reaction can be carried out at a temperature ranging from 0°C to the reflux temperature of a solvent.

[0043] The catalytic reduction can be carried out by using an appropriate metal catalyst such as platinum, palladium/

carbon, Raney nickel, Pearlman's reagent in water, an alcohol such as methanol, ethanol and n-propanol, and acetic acid, as well as a mixed solvent thereof in the presence or absence of an acid such as hydrochloric acid at a temperature ranging from room temperature to the reflux temperature of the solvent under a pressure ranging from normal pressure to 200 kg/cm²

5 [0044] In the seventh synthetic method of the compounds of the present invention, the compound of the general formula (I) wherein R² is phenoxy group which may be substituted can be obtained by reacting the compound of the general formula (I) wherein R² is chlorine atom with a phenol derivative which may be substituted in the presence of a base such as sodium hydroxide and potassium hydroxide in the presence or absence of a solvent such as N,N-dimethylformamide and toluene at a temperature ranging from 0°C to 200°C.

10 [0045] In the eighth synthetic method of the compounds of the present invention, the compound of the general formula (I) wherein R² is amino group can be obtained by subjecting the compound of the general formula (I) wherein R² is phenoxy group which may be substituted, that is obtained by the seventh synthetic method, to reaction together with ammonium acetate in the presence or absence of a solvent such as N,N-dimethylformamide and toluene at a temperature ranging from 0°C to 200°C.

15 [0046] In the ninth synthetic method of the compounds of the present invention, the compound of the general formula (I) wherein R² is amino group which may have one or two substituents or a cyclic amino group which may be substituted can be obtained by subjecting the compound of the general formula (I) wherein R² is chlorine atom to reaction together with an amine derivative which may have one or two substituents or a cyclic amine derivative which may be substituted in the presence or absence of a base such as triethylamine, potassium carbonate and sodium hydride in the presence or absence of a solvent such as water, alcohols including methanol, ethanol and n-propanol, methylene chloride, 1,2-dichloroethane, N,N-dimethylformamide, 1,4-dioxane, tetrahydrofuran and toluene at a temperature ranging from 0°C to 200°C under normal pressure or a pressurized condition.

20 [0047] In the tenth synthetic method of the compounds of the present invention, the compound of the general formula (I) wherein R² is amino group can be obtained by subjecting the compound of the general formula (I) wherein R² is benzylamino group, dibenzylamino group, or p-methoxybenzylamino group, which is obtained in the ninth synthetic method, to catalytic reduction by using an appropriate metal catalyst, or by subjecting the compound of the general formula (I) wherein R² is p-methoxybenzylamino group to deprotection using an acid.

25 [0048] The catalytic reduction can be carried out with a metal catalyst such as palladium/carbon and Pearlman's reagent in a solvent such as alcohols including methanol and ethanol, and water, as well as a mixed solvent thereof at a temperature ranging from room temperature to the reflux temperature of a solvent in the presence or absence of an acid such as hydrochloric acid, acetic acid and formic acid, ammonium formate, cyclohexene, and cyclohexadiene under a pressure ranging from normal pressure to 200 kg/cm². The deprotection using an acid can be carried out with an acid such as hydrochloric acid, sulfuric acid, trifluoroacetic acid and trifluoromethanesulfonic acid in a solvent such as alcohols including methanol and ethanol, methylene chloride, 1,2-dichloroethane, 1,4-dioxane, tetrahydrofuran, toluene, and N,N-dimethylformamide in the presence or absence of a cation scavenger such as anisole and thioanisole at a temperature ranging from 0°C to the reflux temperature of a solvent.

30 [0049] In the eleventh synthetic method of the compounds of the present invention, the compound of the general formula (I) wherein R³ is a saturated nitrogen-containing heterocyclic group which is substituted with oxo group can be obtained by reacting the compound of the general formula (I) wherein R³ is a saturated nitrogen-containing heterocyclic group which is substituted with ethylenedioxy group, with an acid such as hydrochloric acid, an ethyl acetate solution of hydrogen chloride, an ethanolic solution of hydrogen chloride, sulfuric acid, hydrobromic acid, trifluoroacetic acid, p-toluenesulfonic acid, formic acid and acetic acid in the presence or absence of a solvent such as ethyl acetate, methylene chloride, 1,4-dioxane, tetrahydrofuran, methanol, ethanol, n-propanol and N,N-dimethylformamide, or a water-containing solvent thereof at a temperature ranging from 0°C to 200°C.

35 [0050] In the twelfth synthetic method of the compounds of the present invention, the compound of the general formula (I) wherein R³ is a saturated nitrogen-containing heterocyclic group which is substituted with hydroxyimino group or an alkoxyimino group can be obtained by reacting the compound of the general formula (I) wherein R³ is a saturated nitrogen-containing heterocyclic group which is substituted with oxo group, that is obtained by the eleventh synthetic method, with a compound represented by the following general formula (XVIII):

wherein R⁷ represents hydrogen atom or an alkyl group,

55 In the presence or absence of a base such as triethylamine, diisopropylethylamine, sodium carbonate, potassium carbonate, sodium hydrogencarbonate and sodium acetate in a solvent such as alcohols including methanol, ethanol and n-propanol, N,N-dimethylformamide, 1,4-dioxane, tetrahydrofuran, and toluene at a temperature ranging from 0°C

to the reflux temperature of a solvent.

[0051] In the thirteenth synthetic method of the compounds of the present invention, the compound of the general formula (I) wherein R² is hydrogen atom can be obtained by subjecting the compound of the general formula (I) wherein R² is chlorine atom to catalytic reduction using a metal catalyst such as platinum and palladium/carbon in the presence or absence of an acid such as hydrochloric acid and acetic acid in an alcohol solvent such as methanol and ethanol or a water-containing solvent thereof under normal pressure at a temperature ranging from room temperature to the reflux temperature of a solvent.

[0052] In the fourteenth synthetic method of the compounds of the present invention, the compound of the general formula (I), wherein R³ is a saturated nitrogen-containing heterocyclic group having an appropriate substituent on the nitrogen atom which is not bound to the adjacent (CH₂)_m group, can be obtained by reacting an appropriate reagent with the compound of the general formula (I) wherein R³ is a saturated nitrogen-containing heterocyclic group not having a protecting group on the nitrogen atom which is not bound to the adjacent (CH₂)_m group.

[0053] The reaction can be carried out in the presence or absence of a solvent such as N,N-dimethylformamide, methylene chloride, tetrahydrofuran, toluene, pyridine, nitrobenzene, 1,2-dichloroethane, 1,4-dioxane, methanol, ethanol, n-propanol and water, as well as a mixed solvent thereof, in the presence or absence of a base such as triethylamine and potassium carbonate at a temperature ranging from 0°C to 200°C.

[0054] Examples of the appropriate reagent include, for example, alkyl halides, triphenylmethyl chloride, benzyl chloride, benzhydryl chloride, a mixture of formic acid and formalin, acetyl chloride, acetic anhydride, trifluoroacetic anhydride, benzoyl chloride, benzyl chlorocarbonate, ethyl chlorocarbonate, di-tert-butyl dicarbonate, sodium cyanate, alkyl isocyanates, sodium thiocyanate, alkyl isothiocyanates, 1H-pyrazole-1-carboxamide, methanesulfonyl chloride, p-toluenesulfonyl chloride, p-fluorobenzenesulfonyl chloride, urethanes, alkylurethanes, thiourethanes, alkylthiourethanes and the like.

[0055] In the fifteenth synthetic method of the compounds of the present invention, the compound of the general formula (I), wherein R³ is a saturated nitrogen-containing heterocyclic group substituted with an alkoxycarbonyl group or benzyloxycarbonyl group on the nitrogen atom which is not bound to the adjacent (CH₂)_m group, can be obtained by reacting the compound of the general formula (I) wherein R³ is a saturated nitrogen-containing heterocyclic group substituted with an alkyl group or benzyl group on the nitrogen atom which is not bound to the adjacent (CH₂)_m group with an alkyl chlorocarbonate or benzyl chlorocarbonate in the presence or absence of a solvent such as methylene chloride and toluene in the presence or absence of a base such as triethylamine and potassium carbonate at a temperature ranging from 0°C to 200°C.

[0056] Some of the compounds represented by the general formulas (III) to (VIII) which are starting materials or synthetic intermediates in the preparations of the compounds of the present invention are known compounds, which are disclosed in, for example, Journal of Medicinal Chemistry, Vol. 18, p. 726 (1975); Vol. 33, p. 1880 (1990); and Vol. 40, p. 1779 (1997); International Patent Publication No. 97/20820; European Patent Publication No. 223124 (1987) and the like, and can be prepared according to the method described therein. The preparations of some novel compounds will be described in reference examples.

[0057] The medicaments which comprise as an active ingredient the novel 1H-imidazopyridine derivative represented by the aforementioned general formula (I) or (II) or a salt thereof are generally administered as oral preparations in the forms of capsules, tablets, fine granules, granules, powders, syrups, dry syrups and the like, or as parenteral preparations in the forms of injections, suppositories, eye drops, eye ointments, ear drops, nasal drops, dermal preparations, inhalations and the like. These formulations can be manufactured according to conventional methods by addition of pharmacologically and pharmaceutically acceptable additives. For example, in the oral preparations and suppositories, pharmaceutical ingredients may be used such as excipients such as lactose, D-mannitol, corn starch, and crystalline cellulose; disintegrators such as carboxymethylcellulose and carboxymethylcellulose calcium; binders such as hydroxypropylcellulose, hydroxypropylmethylcellulose, and polyvinylpyrrolidone; lubricants such as magnesium stearate and talc; coating agents such as hydroxypropylmethylcellulose, sucrose, and titanium oxide; bases such as polyethylene glycol and hard fat and the like. In injections, or eye or ear drops and the like, pharmaceutical ingredients may be used such as solubilizers or solubilizing aids which may constitute aqueous preparations or those dissolved upon use such as distilled water for injection, physiological saline, and propylene glycol; pH modifiers such as inorganic or organic acids or bases; isotonicities such as sodium chloride, glucose, and glycerin; stabilizers and the like; and in eye ointments and dermal preparations, pharmaceutical ingredients which are suitable for ointments, creams and patches such as white vaseline, macrogols, glycerin, and cotton cloth.

[0058] A dose of the compounds of the present invention to a patient under therapeutic treatment is generally from about 0.1 to 1,000 mg in oral administration, and from about 0.01 to 500 mg in parenteral administration for an adult, which may depend on the symptoms of the patient. The aforementioned dose can be administered once a day or several times a day as divided portions. However, it is desirable that the aforementioned dose may suitably be increased or decreased according to a purpose of a therapeutic or preventive treatment, part or type of a disease, and the age or symptoms of a patient.

Examples

[0059] The present invention will be explained by referring to Reference Examples and Working Examples. However, the scope of the present invention is not limited to these examples.

5 [0060] The abbreviations in the tables have the following meanings: Ph, phenyl; Bn, benzyl; Boc, tert-butoxycarbonyl; Ac, acetyl; Ms, methanesulfonyl; Ts, p-toluenesulfonyl; Me, methyl; Et, ethyl; n-Bu, n-butyl.

Reference example 1

10 Ethyl N-triphenylmethyl-4-piperidinecarboxylate

[0061] To a solution of 76.5 g of ethyl isonipecotate and 81.5 ml of triethylamine in 750 ml of methylene chloride, 149 g of triphenylmethyl chloride divided in three portions was added portionwise at room temperature, and the mixture was stirred for 16 hours. The reaction mixture was added with water and extracted with methylene chloride. The extract
15 was washed successively with water and saturated brine, and dried, and then the solvent was evaporated. The resulting brown liquid was added with diisopropyl ether, and the precipitated crystals were collected by filtration and washed with diisopropyl ether to give 184 g of pale yellow crystals. Recrystallization from ethanol gave colorless prisms having the melting point of from 147.5 to 148.5°C.

25 Reference example 2

N-Triphenylmethyl-4-piperidineethanol

[0062] To a suspension of 10.6 g of lithium aluminium hydride in 300 ml of dried tetrahydrofuran, a solution of 112 g of ethyl N-triphenylmethyl-4-piperidinecarboxylate in 400 ml of dried tetrahydrofuran was added dropwise under ice-cooling, and the mixture was stirred at room temperature for 4 hours. The reaction mixture was added dropwise with a mixture of tetrahydrofuran and 10% aqueous sodium hydroxide solution under ice-cooling. An insoluble matter was filtered off and washed with tetrahydrofuran. The filtrates were combined and concentrated to give a colorless solid. The colorless solid was washed with methanol to give 84.2 g of colorless crystals. Recrystallization from methanol
35 gave colorless crystals having the melting point of from 92 to 99.5°C.

(N-Triphenylmethyl-4-piperidyl)methyl methanesulfonate

- 5 [0065] To a solution of 84.0 g of N-triphenylmethyl-4-piperidinemethanol and 36.2 ml of triethylamine in 420 ml of dried tetrahydrofuran, 18.3 ml of methanesulfonyl chloride was added dropwise under ice-cooling, and the mixture was stirred at room temperature for 5.5 hours. The reaction mixture was added with water and extracted with diethyl ether. The extract was washed successively with water and saturated brine, and dried, and then the solvent was evaporated. The resulting residue was added with a mixture of isopropanol and methanol, and the precipitated crystals were collected by filtration and washed with methanol to give 90.4 g of colorless crystals. Recrystallization from a mixture of methylene chloride and methanol gave colorless prisms having the melting point of from 129.5 to 134°C.

4-Aminomethyl-N-triphenylmethylpiperidine

- 35 [0078] To a suspension of 4.70 g of lithium aluminium hydride in 250 ml of dried tetrahydrofuran, a solution of 47.7 g of 4-azidomethyl-N-triphenylmethylpiperidine in 250 ml of dried tetrahydrofuran was added dropwise under ice-cooling, and the mixture was stirred at room temperature for 4 hours. The reaction mixture was added dropwise with a mixture of tetrahydrofuran and 10% aqueous sodium hydroxide solution under ice-cooling. An insoluble matter in the mixture was filtered off, and washed with tetrahydrofuran. The filtrate and the washings were combined and concen-

40 trated to give 48.1 g of a colorless liquid.

NMR spectrum δ ($CDCl_3$)ppm: 1.14(1H,brs), 1.36(2H,brs), 1.48(2H,qd,J=5,2.5Hz), 1.68 (2H,d,J=11.5Hz), 2.59(2H,d,J=6Hz), 3.10(2H,brs), 7.14(3H,t,J=7.5Hz), 7.25(6H,t,J=7.5Hz), 7.47(6H,brs)

Reference example 26

5,7-Dichloro-6-nitrothieno[3,2-b]pyridine

[0085] A mixture of 24.8 g of 4,5-dihydro-7-hydroxy-6-nitrothieno[3,2-b]pyridine-5-one and 87 ml of phosphorus oxychloride was stirred at 60°C for 24 hours. The reaction solution was concentrated and the residue was dissolved in a mixture of methylene chloride and methanol (10:1), and then the solution was poured into water. An insoluble matter was filtered off, and the organic solvent layer was separated. Furthermore, the aqueous layer was extracted with a mixture of methylene chloride and methanol (10:1). The combined organic solvent layer was dried, and the solvent was evaporated to give brown crystals. The resulting brown crystals were purified by silica gel column chromatography using ethyl acetate - n-hexane (1:3) as an eluting solvent to give 10.6 g of pale brown crystals. Recrystallization from n-hexane gave pale brown crystals having the melting point of from 96 to 97°C.

3-Amino-2-chloro-4-[2-(N-triphenylmethyl-4-piperidyl)ethylamino]quinoline

[0089] To a solution of 6.56 g of nickel chloride hexahydrate and 22.3 ml of methanol in 100 ml of tetrahydrofuran, 2.09 g of sodium borohydride was added portionwise under ice-cooling, and then a suspension of 31.9 g of 2-chloro-3-nitro-4-[2-(N-triphenylmethyl-4-piperidyl)ethylamino]quinoline in 300 ml of tetrahydrofuran was added to the mixture. Successively, 8.35 g of sodium borohydride divided in four portions was added portionwise, and the mixture was stirred at room temperature for 1 hour. The reaction mixture was added with 50 ml of water and an insoluble matter was filtered off, and then the extract was concentrated. The residue was added with water and extracted with ethyl acetate. The extract was washed successively with water and saturated brine, and dried, and then the solvent was evaporated. The

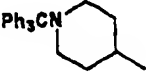

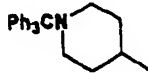

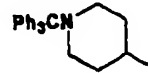

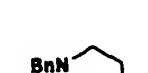

EP 1 104 764 A1

resulting pale green liquid was solidified with a mixture of ethyl acetate and diisopropyl ether, and the solid was washed successively with isopropanol and diisopropyl ether to give 20.1 g of pale green crystals. Recrystallization from isopropanol gave pale green crystals having the melting point of from 116 to 121°C.

Example 1

4-Chloro-1-[2-(N-(triphenylmethyl-4-piperidyl)ethyl)-1H-imidazo[4,5-c]quinoline

[0091] A solution of 19.9 g of 3-amino-2-chloro-4-[2-(N-(triphenylmethyl-4-piperidyl)ethylamino)quinoline, 24.1 ml of ethyl orthoformate and 0.68 g of p-toluenesulfonic acid monohydrate in 200 ml of toluene was refluxed for 6 hours. After cooling, the precipitated crystals were collected by filtration, and washed with diisopropyl ether to give 16.4 g of colorless crystals. Recrystallization from a mixture of methanol and tetrahydrofuran gave colorless crystals having the melting point of from 229 to 234.5°C (decomposition).

Elemental analysis for C ₃₈ H ₃₃ ClN ₄			
Calculated %	C, 77.61;	H, 5.97;	N, 10.06
Found %	C, 77.50;	H, 5.98;	N, 9.95

Example 2

4-Chloro-2-trifluoromethyl-1-[2-(N-(triphenylmethyl-4-piperidyl)ethyl)-1H-imidazo[4,5-c]quinoline

[0092] To a solution of 2.50 g of 3-amino-2-chloro-4-[2-(N-(triphenylmethyl-4-piperidyl)ethylamino)quinoline and 0.76 ml of triethylamine in 60 ml of dried tetrahydrofuran, a solution of 0.63 ml of trifluoroacetic anhydride in 40 ml of dried tetrahydrofuran was added dropwise under ice-cooling, and the mixture was stirred at room temperature for 2 hours. The solvent of the reaction mixture was evaporated, and the residue was added with water and saturated aqueous sodium hydrogencarbonate solution, and extracted with ethyl acetate. The extract was washed successively with water and saturated brine, and dried, and then the solvent was evaporated. A solution of 3.03 g of the resulting pale yellow solid and 0.30 g of p-toluenesulfonic acid monohydrate in 100 ml of toluene was refluxed for 20 hours. After the reaction,

the solvent was evaporated, and the residue was added with methanol and acetone. The precipitated crystals were collected by filtration to give 1.79 g of colorless crystals.

NMR spectrum δ (DMSO- d_6)ppm : 1.35-1.55(3H,m), 1.59(2H,q,J=11Hz), 1.77(2H,d,J=11Hz), 1.80-1.90(2H,m), 2.98(2H,brs), 4.75(2H,t,J=8.5Hz), 7.17(3H,t,J=8Hz), 7.30(6H,t,J=8Hz), 7.41(6H,brs), 7.84(1H,td,J=7.5,2Hz), 7.87(1H,td,J=7.5,2Hz), 8.16(1H,dd,J=7.5,2Hz), 8.34(1H,dd,J=7.5,2Hz)

Example 3

tert-Butyl 4-[2-(4-methyl-2-phenyl-1H-imidazo[4,5-c]quinolin-1-yl)ethyl]-1-piperidinecarboxylate

[0093] A solution of 0.65 g of tert-butyl 4-[2-[(3-amino-2-methylquinolin-4-yl)amino]-ethyl]-1-piperidinecarboxylate, 0.29 g of benzaldehyde and 0.08 g of 2,3-dichloro-5,6-dicyano-1,4-benzoquinone in 5 ml of tetrahydrofuran was stirred at room temperature for 3 days. The reaction mixture was added with saturated aqueous sodium hydrogencarbonate solution and extracted with ethyl acetate. The extract was washed successively with saturated aqueous sodium hydrogencarbonate solution and saturated brine, and dried, and the solvent was evaporated to give a reddish brown liquid. The resulting liquid was purified by silica gel column chromatography using ethyl acetate - n-heptane (1:1) as an eluting solvent, and washed with diisopropyl ether to give 0.55 g of a colorless solid. Recrystallization from diisopropyl ether gave colorless crystals having the melting point of from 146 to 146.5°C.

Example 73

tert-Butyl 4-[2-(4-chloro-2-hydroxy-1H-imidazo[4,5-c]quinolin-1-yl)-ethyl]-1-piperidinecarboxylate

[0095] To a solution of 0.60 g of tert-butyl 4-[2-(3-amino-2-chloro-4-quinolylamino)-ethyl]-1-piperidinecarboxylate and 0.44 g of triphosgene in 10 ml of 1,2-dichloroethane, 0.41 ml of triethylamine was added dropwise, and the mixture was stirred at room temperature for 1 hour. The reaction mixture was neutralized with saturated aqueous sodium hydrogencarbonate solution, and extracted with 1,2-dichloroethane. The extract was washed with saturated brine, and dried, and the solvent was evaporated. The residue was washed with diisopropyl ether to give 0.57 g of colorless crystals. Recrystallization from 1,2-dichloroethane gave colorless crystals having the melting point of from 222 to 223°C

Elemental analysis for C ₂₂ H ₂₇ ClN ₄ O ₃			
Calculated %	C, 61.32;	H, 6.32;	N, 13.00
Found %	C, 61.15;	H, 6.34;	N, 13.00

Example 74

tert-Butyl 4-[2-[4-chloro-2-(4-methanesulfinylphenyl)-1H-imidazo[4,5-c]-quinolin-1-yl]ethyl]-1-piperidinecarboxylate

- 5 [0096] To a suspension of 0.63 g of tert-butyl 4-[2-[4-chloro-2-(4-methylthio-phenyl)-1H-imidazo[4,5-c]quinolin-1-yl]ethyl]-1-piperidinecarboxylate in 18 ml of 1,4-dioxane, a solution of 0.38 g of sodium periodate in 6 ml of water was added dropwise, and the mixture was stirred at 50°C for 13 hours. The reaction solution was concentrated, and the residue was purified by silica gel column chromatography using 1,2-dichloroethane - methanol (10:1) as an eluting solvent to give 0.47 g of a colorless solid. Recrystallization from a mixture of isopropanol and water gave colorless crystals having the melting point of from 183 to 186°C.

Elemental analysis for $C_{29}H_{33}ClN_4O_3S \cdot 1/4H_2O$			
Calculated %	C, 62.46;	H, 6.06;	N, 10.05
Found %	C, 62.33;	H, 5.90;	N, 9.91

Example 75

tert-Butyl 4-[2-[4-chloro-2-(4-methanesulfonylphenyl)-1H-imidazo[4,5-c]-quinolin-1-yl]ethyl]-1-piperidinecarboxylate

- 20 [0097] To a solution of 0.40 g of tert-butyl 4-[2-[4-chloro-2-(4-methylthiophenyl)-1H-imidazo[4,5-c]quinolin-1-yl]ethyl]-1-piperidinecarboxylate in 20 ml of 1,2-dichloroethane, 0.40 g of m-chloroperbenzoic acid was added portionwise little by little, and the mixture was stirred at room temperature for 1 hour. The reaction mixture was neutralized with 10% aqueous sodium hydroxide solution, and extracted with 1,2-dichloroethane. The extract was washed with saturated aqueous sodium hydrogencarbonate solution and dried, and then the solvent was evaporated. The residue was washed with a mixture of diisopropyl ether and diethyl ether to give 0.42 g of colorless crystals. Recrystallization from methanol gave colorless crystals having the melting point of from 149 to 156°C.

Elemental analysis for $C_{29}H_{33}ClN_4O_4S \cdot 1/4H_2O$			
Calculated %	C, 60.72;	H, 5.89;	N, 9.77
Found %	C, 60.72;	H, 5.81;	N, 9.67

Example 76

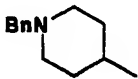

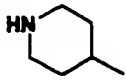

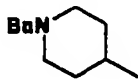

4-Hydroxy-2-phenyl-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline

- 35 40 [0098] A solution of 871 mg of 4-chloro-2-phenyl-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline and 2.5 ml of 6 N hydrochloric acid in 8 ml of 1,4-dioxane was refluxed for 3 hours. The reaction mixture was adjusted to pH 10 with 10% aqueous sodium hydroxide solution, and added with potassium carbonate, and then extracted with 1,2-dichloroethane. The extract was dried, and the solvent was evaporated. The resulting residue was washed with ethyl acetate to give 522 mg of pale brown crystals. Recrystallization from methanol gave pale brown crystals having the melting point of from 242.5 to 244°C.

Elemental analysis for $C_{23}H_{24}N_4O \cdot 1/4H_2O$			
Calculated %	C, 73.28;	H, 6.55;	N, 14.86
Found %	C, 73.32;	H, 6.45;	N, 14.77

- 45 50 [0099] In accordance with the method of Example 76, the compounds of Examples 77 through 79 were obtained.

Example 80

tert-Butyl 4-[2-(4-phenoxy-1H-imidazo[4,5-c]quinolin-1-yl)ethyl]-1-piperidinecarboxylate

[0100] A mixture of 4.46 g of tert-butyl 4-[2-(4-chloro-1H-imidazo[4,5-c]quinolin-1-yl)ethyl]-1-piperidinecarboxylate, 10.1 g of phenol and 1.80 g of potassium hydroxide was stirred at 120°C for 7 hours. The reaction mixture was adjusted to pH 10 with 10% aqueous sodium hydroxide solution, and extracted with ethyl acetate. The extract was washed successively with 10% aqueous sodium hydroxide solution and saturated brine, and dried, and then the solvent was evaporated to give a brown liquid. The resulting brown liquid was purified by silica gel column chromatography using ethyl acetate as an eluting solvent to give 3.59 g of a colorless solid. Recrystallization from a mixture of ethyl acetate and n-hexane gave colorless crystals having the melting point of from 130.5 to 132.5°C.

Example 88

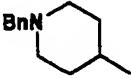

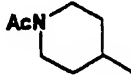

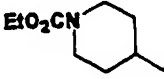

tert-Butyl 4-[2-(4-amino-1H-imidazo[4,5-c]quinolin-1-yl)ethyl]-1-piperidinecarboxylate

[0102] A mixture of 4.40 g of tert-butyl 4-[2-(4-phenoxy-1H-imidazo[4,5-c]quinolin-1-yl)ethyl]-1-piperidinecarboxylate and 34.5 g of ammonium acetate was stirred at 140°C for 3 hours. The reaction mixture was added with water, adjusted to pH 9 with 10% aqueous sodium hydroxide solution, and extracted with methylene chloride. The extract was washed with saturated brine, and dried, and then the solvent was evaporated. The resulting residue was purified by alumina column chromatography using methylene chloride - methanol (100:1 to 20:1) as eluting solvents, and washed with diisopropyl ether to give 1.88 g of colorless crystals. Recrystallization from ethyl acetate gave colorless crystals having the melting point of from 193 to 193.5°C.

Example 104

1-[2-(4-Chloro-2-phenyl-1H-imidazo [4,5-c]quinolin-1-yl)ethyl]-4-piperidinone

- 5 [0108] A mixture of 0.39 g of 1-[2-(4-chloro-2-phenyl-1H-imidazo[4,5-c]quinolin-1-yl)ethyl]-4,4-ethylenedioxy piperidine and 4 ml of concentrated sulfuric acid was stirred at room temperature for 30 minutes. The reaction mixture was poured into ice-water, adjusted to pH 11 with 10% aqueous sodium hydroxide solution, and extracted with ethyl acetate. The extract was washed with saturated aqueous sodium hydrogencarbonate solution and dried, and then the solvent was evaporated to give 0.42 g of a colorless liquid. The resulting liquid was purified by alumina column chromatography using ethyl acetate - n-heptane (1:1) as an eluting solvent to give 0.32 g of colorless crystals. Recrystallization from isopropanol gave colorless needles having the melting point of from 163 to 165°C.

Elemental analysis for $C_{23}H_{21}ClN_4O$

Found %	C, 68.26;	H, 5.31;	N, 13.78

Example 105

20 1-[2-(4-Chloro-2-phenyl-1H-imidazo[4,5-c]quinolin-1-yl)ethyl]-4-piperidinone oxime

- [0109] A mixture of 0.20 g of 1-[2-(4-chloro-2-phenyl-1H-imidazo[4,5-c]quinolin-1-yl)ethyl]-4-piperidinone, 0.04 g of hydroxylamine hydrochloride, 0.09 g of sodium acetate and 4 ml of methanol was stirred at room temperature for 1 hour. The reaction solution was concentrated, and the residue was added with aqueous sodium hydrogencarbonate solution, and extracted with ethyl acetate. The extract was washed with saturated aqueous sodium hydrogencarbonate solution, and dried, and the solvent was evaporated to give 0.25 g of a colorless solid. Recrystallization from ethyl acetate gave colorless crystals having the melting point of from 201 to 207°C (decomposition).

Elemental analysis for $C_{23}H_{22}ClN_5O \cdot 1/2H_2O$			
Calculated %	C, 64.41;	H, 5.40;	N, 16.33
Found %	C, 64.75;	H, 5.32;	N, 16.09

Example 106

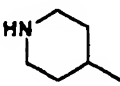

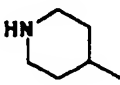

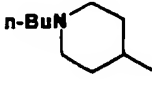

35 tert-Butyl 4-[2-(2-phenyl-1H-imidazo[4,5-c]quinolin-1-yl)ethyl]-1-piperidinecarboxylate

- [0110] A suspension of 0.80 g of tert-butyl 4-[2-(4-chloro-2-phenyl-1H-imidazo-[4,5-c]quinolin-1-yl)ethyl]-1-piperidinecarboxylate and 0.30 g of 5% palladium on carbon in 80 ml of methanol was catalytically hydrogenated at ordinary temperature under atmospheric pressure for 12 hours. After the reaction, the catalyst was filtered off, and the filtrate was concentrated. The residue was purified by silica gel column chromatography using ethyl acetate - n-heptane (1:1 to 4:1) as eluting solvents and washed with diisopropyl ether to give 0.49 g of pale yellow crystals. Recrystallization from diisopropyl ether gave colorless crystals having the melting point of from 138 to 139°C.

Example 110

4-Chloro-2-phenyl-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline hydrochloride and fumarate

[0112] A mixture of 3.64 g of 4-chloro-2-phenyl-1-[2-(N-triphenylmethyl-4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline, 30 ml of methanol and 10 ml of trifluoroacetic acid was stirred at room temperature for 1 hour. The reaction mixture was concentrated, and the residue was washed successively with ethyl acetate and diethyl ether to give pale brown crystals (trifluoroacetate). The resulting crystals were added with ethyl acetate, and extracted with water. The aqueous layer was adjusted to pH 11 with 10% aqueous sodium hydroxide solution, and extracted with a mixture of 1,2-dichloroethane and methanol. The extract was washed with saturated brine, and dried, and then the solvent was evaporated to give 1.74 g of a colorless liquid. A part of the colorless liquid was converted into hydrochloride in a conventional method. Recrystallization from methanol gave colorless crystals having the melting point of from 257 to 265°C (decomposition). In the same manner, fumarate was prepared in a conventional method. Recrystallization from methanol gave colorless crystals having the melting point of from 185.5 to 188.5°C (decomposition).

Elemental analysis for $C_{22}H_{22}ClN_5 \cdot 2CH_3SO_3H$			
Calculated %	C, 49.35;	H, 5.18;	N, 11.99
Found %	C, 49.60;	H, 5.11;	N, 12.16

40 Example 113

4-Amino-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline hydrochloride

45

[0117] A mixture of 1.57 g of tert-butyl 4-[2-(4-amino-1H-imidazo[4,5-c]quinolin-1-yl)ethyl]-1-piperidinecarboxylate and 40 ml of ethyl acetate solution of hydrogen chloride was stirred at room temperature for 5 hours. The reaction mixture was added with water, adjusted to pH 10 with 10% aqueous sodium hydroxide solution, and extracted with methylene chloride. The extract was dried, and the solvent was evaporated. The resulting residue was washed with ethyl acetate to give 1.01 g of pale brown crystals. The resulting crystals were purified by alumina column chromatography using methylene chloride - methanol (40:1 to 20:1) as eluting solvents, and washed with diisopropyl ether to give colorless crystals. Hydrochloride was prepared in a conventional method. Recrystallization from ethanol gave colorless crystals having the melting point of from 243 to 244°C (decomposition).

50

Elemental analysis for $C_{17}H_{21}N_5 \cdot HCl \cdot 3/4H_2O$			
Calculated %	C, 59.12;	H, 6.86;	N, 20.28
Found %	C, 59.10;	H, 6.83;	N, 20.30

55

[0118] In accordance with the methods of Examples 110 through 113, the compounds of Examples 114 through 186

were obtained.

Example 187

1-[2-(N-n-Butyl-4-piperidyl)ethyl]-4-chloro-1H-imidazo[4,5-c]quinoline hydrochloride

[0119] To a suspension of 1.20 g of 4-chloro-1-[2-(4-piperidyl)ethyl]-1H-imidazo-[4,5-c]quinoline trifluoroacetate and 0.77 g of potassium carbonate in 6 ml of N,N-dimethylformamide, 0.30 ml of n-butyl bromide was added dropwise at room temperature, and the mixture was stirred for 5 hours. The reaction mixture was adjusted to pH 10 with 10% aqueous sodium hydroxide solution, and extracted with ethyl acetate. The extract was washed successively with water

and saturated brine, and dried, and then the solvent was evaporated to give 0.92 g of a pale brown liquid. The resulting liquid was dissolved in tetrahydrofuran. The solution was filtered on silica gel, and the filtrate was concentrated to give 0.87 g of a colorless solid. Hydrochloride was prepared in a conventional method. Recrystallization from a mixture of methanol and ethyl acetate gave colorless crystals having the melting point of from 144 to 158°C.

Elemental analysis for $C_{21}H_{27}ClN_4 \cdot 2HCl \cdot 1/2H_2O$			
Calculated %	C, 55.70;	H, 6.68;	N, 12.37
Found %	C, 55.80;	H, 6.65;	N, 12.44

Example 188

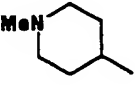

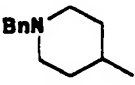

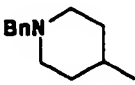

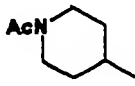

1-[2-(N-Acetyl-4-piperidyl)ethyl]-4-chloro-1H-imidazo[4,5-c]quinoline

[0120] To a solution of 0.60 g of 4-chloro-1-[2-(4-piperidyl)ethyl]-1H-imidazo[4,5-c]quinoline trifluoroacetate in 4 ml of pyridine, 2 ml of acetic anhydride was added, and the mixture was stirred at room temperature for 1 hour. After the reaction, the solvent was evaporated. The residue was added with isopropanol and diisopropyl ether, and the precipitated crystals were collected by filtration, and washed with diisopropyl ether to give 0.45 g of colorless crystals. Recrystallization from a mixture of methylene chloride and diisopropyl ether gave colorless crystals having the melting point of from 183 to 186.5°C.

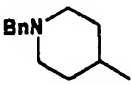

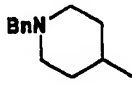

Elemental analysis for $C_{19}H_{21}ClN_4O$			
Calculated %	C, 63.95;	H, 5.93;	N, 15.70
Found %	C, 63.81;	H, 5.87;	N, 15.81

[0121] In accordance with the methods of Examples 187 and 188, the compounds of Examples 189 through 194 were obtained.

Example 195

4-Chloro-1-[2-[N-(4-fluorophenylsulfonyl)-4-piperidyl]ethyl]-1H-imidazo-[4,5-c]quinoline

[0122] To a suspension of 0.50 g of 4-chloro-1-[2-(4-piperidyl)ethyl]-1H-imidazo-[4,5-c]quinoline trifluoroacetate and 0.32 g of potassium carbonate in 2 ml of N,N-dimethylformamide, a solution of 0.23 g of p-fluorobenzenesulfonyl chloride in 3 ml of N,N-dimethylformamide was added dropwise at room temperature, and the mixture was stirred for 5 hours. The reaction mixture was adjusted to pH 10 with 10% aqueous sodium hydroxide solution, and extracted with ethyl acetate. The extract was washed successively with water and saturated brine, and dried, and then the solvent was evaporated to give 0.35 g of a colorless solid. Recrystallization from a mixture of methanol, ethanol and water gave colorless crystals having the melting point of from 175 to 178.5°C.

Elemental analysis for C ₂₃ H ₂₂ ClFN ₄ O ₂ S			
Calculated %	C, 58.41;	H, 4.69;	N, 11.85
Found %	C, 58.43;	H, 4.52;	N, 11.88

Example 196

1-[2-(N-Methanesulfonyl-4-piperidyl)ethyl]-4-phenoxy-1H-imidazo[4,5-c]-quinoline

[0123] To a solution of 1.00 g of 4-phenoxy-1-[2-(4-piperidyl)ethyl]-1H-imidazo-[4,5-c]quinoline trifluoroacetate and 0.57 ml of triethylamine in 10 ml of methylene chloride, 0.16 ml of methanesulfonyl chloride was added dropwise at room temperature, and the mixture was stirred for 1.5 hours. The reaction mixture was added with water, and extracted with methylene chloride. The extract was washed with water, and dried, and then the solvent was evaporated to give a colorless liquid. The resulting colorless liquid was solidified with ethyl acetate, and the solid was washed with diethyl ether to give 0.80 g of colorless crystals. Recrystallization from a mixture of methylene chloride and ethyl acetate gave colorless crystals having the melting point of from 173.5 to 176°C.

Elemental analysis for C ₂₄ H ₂₆ N ₄ O ₃ S

Found %	C, 60.79;	H, 8.66;	N, 21.97

[0126] In accordance with the method of Example 200, the compound of Example 201 was obtained.

Example 201

4-[2-(4-Chloro-2-phenyl-1H-imidazo[4,5-c]quinolin-1-yl)ethyl]-N-methyl-1-piperidinecarbothioamide

[0127]

Appearance: colorless crystals
Recrystallization solvent: methanol
mp: 215-220°C (decomposition)

Elemental analysis for C ₂₅ H ₂₈ ClN ₅ S			
Calculated %	C, 64.71;	H, 5.65;	N, 15.09
Found %	C, 64.80;	H, 5.62;	N, 14.96

Example 202

1-[2-(1-Amidino-4-piperidyl)ethyl]-4-chloro-2-phenyl-1H-imidazo[4,5-c]-quinoline hydrochloride

[0128] A solution of 0.75 g of 4-chloro-2-phenyl-1-[2-(4-piperidyl)ethyl]-1H-imidazo-[4,5-c]quinoline, 0.40 g of 1H-pyrazole-1-carboxyamidine hydrochloride and 0.39 ml of triethylamine in 5 ml of N,N-dimethylformamide was stirred at room temperature for 19 hours. The reaction solution was concentrated and the residue was added with ethanol, and then the precipitated crystals were collected by filtration to give 0.51 g of colorless crystals. Recrystallization from ethanol gave colorless crystals having the melting point of from 270 to 273°C (decomposition).

Elemental analysis for C ₂₄ H ₂₅ ClN ₆ · HCl · 1/2H ₂ O			
Calculated %	C, 60.25;	H, 5.69;	N, 17.57
Found %	C, 60.47;	H, 5.61;	N, 17.36

[0129] As an example of the excellent effects of the compounds according to the present invention, experimental results of inhibitory actions against production of TNF- α and IL-1 β in human cells will be shown below

1. Preparation of blood cells for culture

[0130] About 50 mL of whole blood was collected from adult healthy volunteers by venepuncture into a plastic tube which containing 170 μ L of Novo-heparin 1000 (Novo-Nordisk A/S). Then, PBMCs (Peripheral Blood Mononuclear Cells) were prepared using a cell separation tube, LeucoPREP™ (Becton Dickinson), and cultured with RPMI-1640 medium (Nissui Pharmaceutical Co.) containing 2 mM L-glutamine (Life Technologies), 2.5 U/ml penicillin-2.5 μ g/mL streptomycin solution (Life Technologies) supplemented with 10% fetal calf serum (Intergen Company) at 1×10^6 cells/mL.

2. Preparation of test compounds

[0131] Test compounds were dissolved in distilled ultra-pure water, dimethyl sulfoxide, or 0.1 N hydrochloric acid at 20 μ M, and then sequentially diluted with saline and used. The compounds were examined at concentrations ranging from 10^{-10} M to 10^{-5} M.

3. Treatment of cells with medicaments

[0132] 10 μ L of 1 μ g/mL lipopolysaccharide (LPS) was added to a 96-well (flat bottom) plate for cell culture, MicroTest III™ tissue culture plate (Becton Dickinson), containing 180 μ L of the PBMCs in the aforementioned medium. After 30 minutes, 10 μ L of the solution of the test compound or the solvent was further added to each well, and the plate was covered with a plastic lid and incubated at 37°C for 16 hours in an atmosphere of 5% CO₂.

4. Determination of human TNF- α and human IL-1 β

[0133] An enzyme immunoassay by the sandwich method was performed to determine the human TNF- α and human IL-1 β in the culture supernatant. The anti-cytokine antibody (the first-antibody) was diluted and placed in a 96-well microtiter plates for coating. After the wells were washed, the culture supernatant was appropriately diluted, and then added to each well and incubated. Then the second-antibody against cytokine and the third-antibody against the second-antibody were successively added while applying washing processes between the operations. After the final washing process, a tetramethylbenzidine solution (DAKO) was added to each well to start the coloring reaction. The coloring reaction was quenched with 1 N sulfuric acid, and then the absorbance at 450 nm of each well was measured by a microplate reader, M-Vmax™ (Molecular Devices). The concentrations of the cytokines were determined by quantification software, Softmax™ (Molecular Devices), in comparison with the calibration curves obtained by using the re-

combinant cytokines as the standards. For determination of human TNF- α , monoclonal anti-human TNF- α (ENDOG-
 EIN), polyclonal rabbit anti-human TNF- α (Pharma Biotechnologie Hannover), peroxidase conjugated donkey anti-
 rabbit IgG (Jackson ImmunoRes. Labs.), and recombinant human TNF- α (INTERGEN Company) were used for the
 first-, second- and third-antibodies and the standard for the calibration curve, respectively. For determination of human
 5 IL-1 β , monoclonal anti-human IL-1 β (Cistron), polyclonal sheep anti-human IL-1 β (Biogenesis), HRP conjugated don-
 key anti-goat IgG (Chemicon International), and recombinant human IL-1 β (R&D Systems) were used for the first-,
 second- and third-antibodies and the standard for the calibration curve, respectively.

[0134] In both cases for TNF- α and IL-1 β , the activities of each test compound are shown as percentages (%) of
 the amount of the cytokine induced by treatment with LPS together with the test compound against the amount of the
 10 cytokine induced by treatment solely with LPS

[0135] Results are shown in tables 1 and 2.

Table 1:

Inhibitory action against TNF- α production in human cells					
Compounds	Administered concentration ($\mu\text{mol/L}$)				
	0.001	0.01	0.10	1.0	10
Example 89	91	86	90	84	17
Example 110	80	77	26	1	0
Example 113	68	81	86	69	29
Example 117	117	77	71	24	0
Example 118	79	91	88	51	3
Example 121	81	91	49	0	0

Table 2:

Inhibitory action against IL-1 β production in human cells					
Compounds	Administered concentration ($\mu\text{mol/L}$)				
	0.001	0.01	0.10	1.0	10
Example 89	112	102	96	63	0
Example 110	119	105	85	64	14
Example 113	104	109	116	96	30
Example 117	119	106	111	72	8
Example 118	96	106	102	59	0
Example 121	102	108	87	24	0

[0136] These results clearly indicate that the compounds of the present invention have excellent inhibitory actions
 45 against production of TNF and IL-1.

Industrial Applicability

[0137] The compounds of the present invention have excellent inhibitory actions against production of TNF or IL-1
 50 and are extremely useful as preventive or therapeutic agents of diseases mediated by these cytokines.

Claims

55 1. A 1H-imidazopyridine derivative represented by the following general formula or a salt thereof:

5

10

15

wherein R¹ represents hydrogen atom, hydroxyl group, an alkyl group which may have one or more substituents, a cycloalkyl group which may be substituted, a styryl group which may be substituted, or an aryl group which may have one or more substituents; R² represents hydrogen atom, an alkyl group, a halogen atom, hydroxyl group, an amino group which may have one or two substituents, a cyclic amino group which may be substituted, or a phenoxy group which may be substituted; ring A represents a homocyclic or a heterocyclic ring which may be substituted with one or more alkyl groups, alkoxy groups, or halogen atoms; R³ represents a saturated nitrogen-containing heterocyclic group which may be substituted; and m represents an integer of from 0 to 3; provided when R³ represents unsubstituted piperidino group, at least one of R¹ and R² is not hydrogen atom.

20

2. A 1H-imidazopyridine derivative represented by the following general formula or a salt thereof:

25

30

35

40

wherein R¹ represents hydrogen atom, hydroxyl group, an alkyl group which may have one or more substituents, a cycloalkyl group which may be substituted, a styryl group which may be substituted, or an aryl group which may have one or more substituents; R² represents hydrogen atom, an alkyl group, a halogen atom, hydroxyl group, an amino group which may have one or two substituents, a cyclic amino group which may be substituted, or a phenoxy group which may be substituted; ring A represents a homocyclic or heterocyclic ring which may be substituted with one or more alkyl groups, alkoxy groups, or halogen atoms; m represents an integer of from 0 to 3; R⁴ represents hydrogen atom, an alkyl group, benzyl group, triphenylmethyl group, an alkanoyl group which may be substituted, an alkoxycarbonyl group, benzyloxycarbonyl group, a thlocarbamoyl group which may be substituted, an alkanesulfonyl group, a benzenesulfonyl group which may be substituted, or amidino group; Y represents methylene group, oxygen atom, sulfur atom, nitrogen atom, a group represented by NH, or a single bond; and n represents an integer of from 0 to 2.

45

50

3. The compound or the salt thereof according to claim 1 or claim 2, wherein the ring A is benzene ring or thiophene ring.
4. A medicament which comprises as an active ingredient the 1H-imidazopyridine derivative or a pharmacologically acceptable salt thereof according to claim 1 or claim 2.
5. The medicament according to claim 4 which is used for preventive or therapeutic treatment of a disease in which a cytokine is mediated.

The amination of 3-nitro-1,5-naphthyridines by liquid ammonia/potassium permanganate^{1,2}. A new and convenient amination method

M. Wozniak, H. C. van der Plas*, M. Tomula and A. van Veldhuizen

Laboratory of Organic Chemistry, Agricultural University, Wageningen, The Netherlands
(Received June 3rd, 1983)

Abstract. Treatment of a solution of 3-nitro-2-X-1,5-naphthyridines (X = H, OC₂H₅, Cl, NH₂, OH) in liquid ammonia with potassium permanganate gives the corresponding 4-amino-3-nitro-2-X-1,5-naphthyridines in moderate to good yields. From ¹H NMR spectroscopy, good evidence has been obtained for the intermediacy of 4-amino-1,4-dihydro-3-nitro-2-X-1,5-naphthyridines in these amination reactions.

In several recent papers we have shown that diazines (pyridazine, pyrimidine, pyrazine and some of their derivatives³) and naphthyridines^{1,4} can easily be converted into amino compounds on treatment with potassium amide/liquid ammonia/potassium permanganate. For amination of highly electrophilic compounds, such as tetrazines⁵, pteridines⁶, 3-nitro-1,6-^{1,8} and 3-nitro-1,8-naphthyridines^{7,8}, potassium amide is not required; liquid ammonia/potassium permanganate (LAP) is found to be effective for amination of these substrates. The amination of the 3-nitronaphthyridines leads to 4-amino-3-nitro-1,6- and 4-amino-3-nitro-1,8-naphthyridines, with no trace of the corresponding 2-amino-3-nitronaphthyridines being obtained. The exclusive formation of the 4-amino compounds was explained by the fact that the formation of the C-4 σ adduct, 4-amino-1,4-dihydro-3-nitronaphthyridine, is preferred over that of the C-2 σ adduct, 2-amino-1,2-dihydro-3-nitronaphthyridine, due to its higher thermodynamic stability^{1,7,8}.

In order to extend the scope of the application of this new reagent LAP, we investigated the amination of a number of 3-nitro-2-X-1,5-naphthyridines (1a-1e, X = H, OEt, Cl, NH₂, OH). As shown by ¹H NMR spectroscopy, all of the compounds 1a-1e undergo covalent addition at C-4, when dissolved in liquid ammonia, to give the 4-amino-1,4-dihydro-3-nitro-1,5-naphthyridines (2a-2e) (see Table).

a) X = H; b) X = OC₂H₅; c) X = Cl; d) X = NH₂; e) X = OH

^a Mixture of adduct and starting material.

Additional evidence that addition has taken place at C-4 and not at C-2 was provided by the ^1H NMR spectrum of 2-deutero-3-nitro-1,5-naphthyridine in liquid ammonia, which showed the signal of the C-4 hydrogen at 5.36 ppm. The upfield shifts δ observed for the compounds (1a-1d) lie between 3.23 and 3.81 ppm and are in the same range as those found for 3-nitro-1,6-naphthyridines and 3-nitro-1,8-naphthyridines (δ 3.5-4.4)^{1,7}. For the 1,5-naphthyridine 1e, δ is somewhat lower (2.55), which may be due to the fact that the C-4 amino adduct 2e is (partly) deprotonated. Introduction of electron-attracting or electron-donating substituents at position 2 does not change the position of addition of ammonia. In all compounds, the addition at C-4 is strongly promoted and can be rationalized using the same arguments as those advanced to explain the exclusive C-4 addition in the 3-nitro-1,6- and 3-nitro-1,8-naphthyridines^{1,7}. If position 4 is occupied, no addition takes place: 4-amino-3-nitro-1,5-naphthyridine - in contrast to 1d - does not undergo addition.

Addition of potassium permanganate to the solution of 2a in liquid ammonia gave 4-amino-3-nitro-1,5-naphthyridine (3a, 74%). The structure assignment of 3a was based on microanalytical data and comparison of the infrared spectrum with that of an authentic specimen prepared by aminolysis of 4-chloro-3-nitro-1,5-naphthyridine. Using a similar procedure, the 3-nitro-1,5-naphthyridines (1b-1e) were converted into the 4-amino-3-nitro-2-X-1,5-naphthyridines (3b-3e) (X = OC_2H_5 , 70%; X = Cl, 32%; X = NH_2 , 33%; X = OH, 51%). The 4-amino-2-ethoxy-3-nitro-1,5-naphthyridine (3b) was also prepared by reacting the 4-amino-2-chloro compound 3c with sodium ethoxide. 2,4-Diamino-3-nitro-1,5-naphthyridine (3d) was also independently synthesized by aminolysis of 3e. We observed that the yields were higher when the reactions were carried out in a large volume of liquid ammonia (see Exp.). When the amount of liquid ammonia was diminished, the yields dropped sharply. In contrast to 3-nitro-1,6- and 3-nitro-1,8-naphthyridin-2[1H]-one, amination of 1e using LAP appeared to be successful. The reason for this is probably that, due to the large volume of liquid ammonia used, more C-4 adduct 2e is present in the solution.

Preparation of starting materials

The compounds 1a, 1b, 1d, 1e were all prepared using standard procedures. The preparation of 1c, according to patent literature⁹, gave rise to difficulties; the use of phosphorus pentachloride and phosphoryl chloride, as prescribed, gave not only the required 1c, but also 2,3-dichloro-1,5-naphthyridine, as evidenced by the ^1H NMR spectrum of the mixture (ratio 2/3). Separation proved difficult and could only be achieved by means of TLC. However, on using only phosphoryl chloride as reagent and on extending the duration of the reaction from 2½ h to 15 h, 1c could be obtained in 60% yield.

Experimental

Measurements of ^1H NMR spectra, IR and mass spectra were carried out in the same manner as described for 3-nitro derivatives of 1,6- and 1,8-naphthyridine^{1,7}. Melting points are uncorrected.

1. Synthesis of starting materials and reference compounds

The following compounds were prepared according to the methods reported in the literature: 3-nitro-1,5-naphthyridine¹⁰, 2-ethoxy-3-nitro-1,5-naphthyridine¹¹, 4-chloro-3-nitro-1,5-naphthyridine¹⁰ and 3-nitro-1,5-naphthyridin-2[1H]-one¹².

2-Chloro-3-nitro-1,5-naphthyridine (1c)

A mixture of 3-nitro-1,5-naphthyridin-2[1H]-one (1e) (0.8 g, 3.8 mmole) and 30 ml of phosphoryl chloride was refluxed for 15 h. Excess of the reagent was distilled off and the residue was poured onto ca. 50 g of ice and neutralized with aqueous ammonia. The

precipitate was filtered off, washed with water, dried and extracted three times with 300 ml of boiling heptane. Combined heptane solutions (400 ml) were washed with charcoal, filtered, concentrated to about 100 ml and cooled (refrigerator) to yield 0.52 g (60%) of light-yellow plates, m.p. 208-210°C (subl.) (lit.⁹ 205°C). $\text{C}_8\text{H}_5\text{ClN}_2\text{O}_2$ calcd.: C 45.84, H 1.92, N 20.04; found: C 45.48, H 1.85, N 19.83. ^1H NMR (CDCl_3): δ 9.09 (dd, H-6), 8.83 (s, H-4); 8.39 (dd, H-8); 7.78 (dd, H-7); $J_{6,7}$ 4.5, $J_{7,8}$ 2.0; $J_{2,3}$ 8.5 Hz. MS m/e (relative intensity, %): 211, 209 (15, 45, M^+); 165, 163 (33, 100; $\text{M}^+ - \text{NO}_2$).

Reaction of 3-nitro-1,5-naphthyridin-2[1H]-one (1e) with phosphorus pentachloride and phosphoryl chloride

A mixture of 3-nitro-1,5-naphthyridin-2[1H]-one (2.2 g, 11.5 mmole) and 3 g of phosphorus pentachloride in 2.2 g of phosphoryl chloride was heated in a flask (stoppered and having a tube containing anhydrous calcium chloride) at 135°C for 2½ h. The mixture was poured onto ca. 100 g of ice and neutralized with aqueous ammonia solution. The solid was filtered off, washed with water, dried and extracted with heptane in a Soxhlett apparatus for 10 h. Heptane solution (400 ml) was boiled with charcoal, filtered and cooled to give 0.75 g of the light-yellow crystalline product, m.p. 170-200°C. The ^1H NMR (CDCl_3) and mass spectrum of this product unequivocally showed it to be a mixture of 2-chloro-3-nitro-1,5-naphthyridine (1c) and 2,3-dichloro-1,5-naphthyridine (ratio 2/3). A part of the product (0.15 g) was dissolved in a small amount of chloroform and the solution was applied to two plates (10 × 10 cm) covered with a 2 mm layer of silica gel PF₂₅₄ (original Merck plates). The chromatograms were developed twice using a mixture of hexane/ethyl ether (2/1) as eluent. Two bands were obtained showing UV absorbance; both were extracted with chloroform. After evaporation of the solvent from the extract of the first band (lower R_f), the residue was crystallized from hexane to give 2-chloro-3-nitro-1,5-naphthyridine (30 mg), light-yellow plates, m.p. 208-210°C. The compound was identified by comparison of its properties (m.p., IR spectrum) with those of an authentic specimen (*vide supra*). The residue from the extract of the band with the higher R_f was also crystallized from hexane yielding 2,3-dichloro-1,5-naphthyridine (36 mg), white needles, m.p. 193-195°C (subl.). $\text{C}_8\text{H}_4\text{Cl}_2\text{N}_2$ calcd.: C 48.25, H 2.01, N 14.06; found: C 47.88, H 1.95, N 14.35. ^1H NMR (CDCl_3): δ 8.97 (dd, H-6); 8.50 (s, H-4); 8.27 (dd, H-8); 7.63 (dd, H-7); $J_{6,7}$ 4.5; $J_{7,8}$ 2.0; $J_{2,3}$ 8.5 Hz. MS m/e (relative intensity, %): 202, 200, 198 (6, 35, 55; M^+); 165, 163 (33, 100; $\text{M}^+ - \text{Cl}$).

4-Amino-3-nitro-1,5-naphthyridine (3a)

The compound was obtained by heating 4-chloro-3-nitro-1,5-naphthyridine (0.15 g) with ethanolic ammonia solution (50 ml) in an autoclave at 110°C for 4 h¹³; yield 75%, yellow needles, m.p. 228-229°C (from $\text{DMF}/\text{H}_2\text{O}$).

2-Amino-3-nitro-1,5-naphthyridine

A mixture of 2-chloro-3-nitro-1,5-naphthyridine (0.1 g, 0.47 mmole) and 5 ml of ethanol saturated at 0°C with gaseous ammonia was heated in a sealed tube at 110°C for 4 h. After cooling the solvent, excess ammonia was evaporated and 10 ml of water were added to the residue. The red crystalline precipitate was filtered off, washed with water and crystallized from ethanol yielding 67 mg (74%) of red plates, m.p. 254-255°C (> 245°C the compound partially decomposes). $\text{C}_8\text{H}_6\text{N}_4\text{O}_2$ calcd.: C 50.52, H 3.18; found: C 50.16, H 3.43. MS m/e (relative intensity, %): 190 (100; M^+); 144 (66; $\text{M}^+ - \text{NO}_2$); 117 (42; [($\text{M} - \text{NO}_2$) - HCN]); 90 (15; [($\text{M} - \text{NO}_2$) - 2HCN]).

2-Deutero-3-nitro-1,5-naphthyridine

A mixture of 3-nitro-1,5-naphthyridine (100 mg) and 3 ml of deuterated water was heated in a sealed tube at 180°C for 5 h. After cooling, the precipitate was filtered off and dried. Yield 90 mg, m.p. 183-184°C. ^1H NMR spectroscopy showed that position 2 was ca. 90% deuterated.

II. Amination of 3-nitro-1,5-naphthyridines. General procedure

To a solution of the appropriate 3-nitro-1,5-naphthyridine (0.08–0.2 g) in 30–250 ml of liquid ammonia, an excess of potassium permanganate (0.2–2 g) was added in portions and the mixture stirred for an additional 15 min. Ammonia was evaporated off and to the residue obtained 50–100 ml of water was added. The mixture was then continuously extracted with chloroform for 15 h. The crude residue remaining after evaporation of chloroform was crystallized from the appropriate solvent (see below).

4-Amino-3-nitro-1,5-naphthyridine (3a)

Amination of 3-nitro-1,5-naphthyridine (0.2 g), using the general procedure described above, provided a residue, which, after crystallization from DMF-H₂O (1:1), gave 0.16 g (74%) of 3a, m.p. 228–229°C being identical (IR spectroscopy) with the specimen obtained by amination of 4-chloro-3-nitro-1,5-naphthyridine¹¹.

4-Amino-2-ethoxy-3-nitro-1,5-naphthyridine (3b)

Method A. 2-Ethoxy-3-nitro-1,5-naphthyridine (0.08 g, 0.36 mmole), dissolved in 150 ml of liquid ammonia, was treated with 1.5 g of potassium permanganate using the general procedure described above. The crude product was crystallized from heptane to give 60 mg (70%) of yellow needles, m.p. 137–138°C. C₁₀H₁₀N₄O₃, calcd.: C 51.28, H 4.30, N 23.93; found: C 50.88, H 4.29, N 23.81. ¹H NMR (CDCl₃): δ 8.60 (dd, H-6); 7.93 (dd, H-8); 7.55 (dd, H-7); 4.61 (q, CH₂); 1.46 (tr, CH₃); ca. 7.82–7.45 (broad s; NH₂). This signal is partially overlapped by the H-7 signal. J_{6,7} 4.2; J_{6,8} 1.8; J_{7,8} 8.5; J(CH₂–CH₃) 7.0 Hz. MS *m/e* (relative intensity, %): 234 (21; M⁺); 206 (42; M⁺–C₂H₅); IR (cm^{–1}): 3425, 3295 (NH stretching); 1650 (NH bending), 1530 [ν_{as}(NO₂)] 1340 [ν_s(NO₂)].

Method B. To a solution of 35 mg (1.54 mgat) of sodium in 10 ml of absolute ethanol was added 4-amino-2-chloro-3-nitro-1,6-naphthyridine (3c) (20 mg, 0.09 mmole) and the mixture stirred at room temperature for 6 h. The solution was left overnight and then neutralized with 10% aqueous solution of hydrochloric acid. Ethanol was evaporated off, 10 ml of water was added to the residue and the mixture was then alkalinized using an aqueous solution of ammonia. The solid was filtered off, washed with water and dried. Extraction of the solid with hot heptane gave a solution from which 8 mg (32%) of yellow needles crystallized. The product was identical (m.p., IR spectrum) to that obtained using method A. The product, insoluble in the hot heptane, was crystallized from water to yield 5 mg (27%) of light-yellow needles whose properties proved to be identical (m.p., IR spectrum) with those of 4-amino-3-nitro-1,5-naphthyridine-2[1H]-one (3e).

4-(Imino-2-chloro-1-nitro-1,5-naphthyridine) (3c)

2-Chloro-3-nitro-1,5-naphthyridine (0.1 g, 0.47 mmole) in 250 ml of liquid ammonia was treated with 2.0 g of KMnO₄ using the procedure described above. The crude product was crystallized from toluene yielding 4 mg (32%) of yellow needles, m.p. 252–254°C. C₉H₆Cl₂N₄O₃, calcd.: C 42.78, H 2.24, N 24.94; found: C 43.23, H 2.22, N 24.45. ¹H NMR (DMSO-d₆): δ 8.93 (dd, H-6); 8.30 (broad s, NH₂); 8.24 (dd, H-8); 7.90 (dd, H-7); J_{6,7} 4.5; J_{6,8} 2.0; J_{7,8} 8.5 Hz. MS *m/e* (relative intensity, %): 226, 224 (33, 100; M⁺); 196, 194 (24, 72; M⁺–NO); 180, 178 (13, 39; M⁺–NO₂); IR (cm^{–1}): 3435, 3280, 3180 (NH stretching); 1690 (NH bending), 1535 [ν_{as}(NO₂)] 1335 [ν_s(NO₂)].

2,4-Diamino-3-nitro-1,5-naphthyridine (3d)

Method A. 2-Amino-3-nitro-1,5-naphthyridine (0.1 g, 0.53 mmole) in 200 ml of liquid ammonia was treated with 2.0 g of potassium permanganate using the general procedure described above. The product was crystallized from methanol yielding 35 mg (33%) of orange needles, m.p. 267–269°C. C₈H₆N₄O₃, calcd.: C 46.83, H 3.14, N 34.14; found: C 46.72, H 3.22, N 34.63. ¹H NMR (DMSO-d₆): δ 8.91 (broad s, NH₂); 8.50 (dd, H-6); 7.85–7.50 (H-7, H-8, NH₂ group); J_{6,7} 3.8; J_{6,8} 1.8 Hz. MS *m/e* (relative intensity, %): 205 (100; M⁺); 188 (8; M⁺–OH); IR (cm^{–1}): 3455, 3415, 3290, 3170 (NH stretching); 1620 (NH bending); 1530 [ν_{as}(NO₂)] 1340 [ν_s(NO₂)].

Method B. A mixture of 4-amino-2-chloro-3-nitro-1,5-naphthyridine (3c) (20 mg, 0.09 mmole) and 20 ml of ethanol, saturated at 0°C with gaseous ammonia, was heated in a sealed tube at 140°C for 4 h. Ammonia and ethanol were evaporated off on a water-bath and to the residue 5 ml of water were added. The solid material obtained was filtered off, washed with water, dried and crystallized from methanol to give 12 mg (66%) of a product which was identical (m.p., IR spectrum) with the 2,4-diamino-3-nitro-1,5-naphthyridine (3d) obtained using method A.

4-Amino-3-nitro-1,5-naphthyridin-2[1H]-one (3e)

3-Nitro-1,5-naphthyridin-2[1H]-one (1e) (0.1 g, 0.52 mmole) in 150 ml of liquid ammonia was treated with 2 g of KMnO₄ using the general procedure described above. The product was crystallized from water to give 55 mg (51%) of light-yellow needles, m.p. 340–341°C. C₈H₆N₄O₃, calcd.: C 46.60, H 2.93, N 27.18; found: C 46.36, H 2.90, N 26.88. ¹H NMR (DMSO-d₆): δ 8.53 (d, H-6, and s, NH₂ group); 7.67 (d, H-7 and H-8) (deceptive simplicity). MS *m/e* (relative intensity, %): 206 (100; M⁺); IR (cm^{–1}): 3405, 3290 (NH stretching); 1670 (CO stretching); 1630 (NH bending); 1525 [ν_{as}(NO₂)] 1320 [ν_s(NO₂)].

Water- and hydroxide-ion-catalyzed hydrolysis of 1-acyl-1,2,4-triazoles in mixed aqueous solvents. The effect of substrate hydrophobicity

Willem Karzijn and Jan B. F. N. Engberts

Department of Organic Chemistry, University of Groningen, Nijenborgh 16, 9747 AG Groningen, The Netherlands

(Received July 8th, 1983)

Abstract. The solvent dependence of the enthalpies and entropies of activation for the title reactions in water-rich *t*-BuOH–H₂O responds to the hydrophobicity of the substrate.

Introduction

The distinct properties of cool, liquid water¹ directly affect or even determine many of the chemical aspects of life processes². Characteristic solvation behaviour in aqueous solution is also reflected in many mechanistic
